

# CARDIORAG | DAY 2 FACILITATOR SPOT-CHECK PROTOCOL

Mandatory In-Person Audit to Combat Metric Drift & Guarantee Verification

## 1. PURPOSE & ANTI-DRIFT PHILOSOPHY

- Self-Reported Metric Drift: Teams often grade borderline chunks as relevant (1) without verifying exact recommendation IDs.
- Reproducibility Requirement: Guarantees that reported Precision@5, Hit Rate, and MRR reflect actual live retriever outputs.
- Refusal & Hallucination Guard: Validates that out-of-scope queries (e.g. breast cancer screening) are strictly refused.

## 2. THE 5-STEP LIVE IN-PERSON AUDIT WORKFLOW

|                          |                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------|
| Step 1: Random Draw      | Facilitator unannouncedly draws 1 in-scope query + 1 out-of-scope query from team scorecard.        |
| Step 2: Live Execution   | Participant runs retrieval query live in terminal/notebook directly in front of the facilitator.    |
| Step 3: Chunk Audit      | Facilitator inspects top-5 chunks, chunk_ids, and PDF page provenance against data/raw/ guidelines. |
| Step 4: Cross-Grading    | Facilitator independently grades 0/1 relevance against clinical ground truth recommendations.       |
| Step 5: Delta & Sign-off | Compares Reported vs Verified Live P@5. Discrepancy delta must be <= 10% for certification.         |

## 3. AUDIT SCORING RUBRIC & DISCREPANCY TOLERANCE

|                       |                                                     |                                                           |
|-----------------------|-----------------------------------------------------|-----------------------------------------------------------|
| • Precision@5 Delta:  | Tolerance:  Reported P@5 - Live P@5  <= 10%         | Action: PASS if <= 10%; Re-evaluate scorecard if > 10%    |
| • Hit@5 Alignment:    | Tolerance: Exact agreement on Top-1 / Top-3 chunk   | Action: Invalidate question score on mismatch             |
| • Refusal Validation: | Tolerance: 100% clean refusal on out-of-scope query | Action: Critical failure if retriever hallucinates answer |
| • Provenance Check:   | Tolerance: 100% valid PDF page & chunk_id link      | Action: Disqualify index if fake chunk IDs detected       |

## OFFICIAL FACILITATOR SPOT-CHECK AUDIT SHEET

Team / Table Number : \_\_\_\_\_

Participant Name(s) : \_\_\_\_\_

Selected In-Scope QID : [ ] WHO\_01..07 [ ] NICE\_01..07 .. Query: \_\_\_\_\_

Reported Precision@5 : \_\_\_\_\_ %    Verified Live P@5: \_\_\_\_\_ %    Delta (·): \_\_\_\_\_ %

Selected Refusal QID : [ ] WHO\_08 (Breast Cancer) [ ] NICE\_08 (Appendicitis) .. Refused? [ ] YES [ ] NO

Audit Outcome : [ ] PASSED & CERTIFIED (Delta <= 10%) [ ] RE-EVALUATION REQUIRED

Facilitator Name : \_\_\_\_\_ Signature: \_\_\_\_\_

Audit Timestamp : \_\_\_\_ / \_\_\_\_ / 2026 .. \_\_\_\_ : \_\_\_\_ Status: [X] OFFICIAL VERIFICATION
